

The Three Main Reasons You Deserve a New Home Energy System

The Project Promise

We are so confident in the products and services that we provide, that we will provide a parts and labor guarantee it for two full years on all new installations. The Project Promise will give you the peace of mind knowing that if there is a problem with your unit, we will be there to fix it for free for the first two years. That's parts and labor! At Project Heating and Cooling, we are also about making you feeling comfortable about your decision to choose Project. Your Project representative will give you all additional details.

Cost Savings

- New high efficiency comfort systems are proven energy and money savers.
- With an energy efficient system, the higher the efficiency rating, the more energy (and money) you save.
- Many comfort options can help reduce energy costs by 30% to 50%.
- A high efficiency system can add thousands of dollars to your home's resale value.

Cleaner Air

- According to the EPA, human exposure to indoor air pollutants may be 2-5 times higher than outdoor levels. Since most of us spend about 90% of our time indoors, these levels are of particular concern.
- Pollen, mold spores, pet dander and other airborne allergens can aggravate indoor allergy and asthma symptoms.
- Microscopic dust can increase cleaning time and costs.
- Today's comfort options can improve your indoor air quality, provide fresher air which can contribute to your family's health and make for a cleaner, lower-maintenance home.

Comfort

- Three main factors affect your comfort: humidity, temperature and sound.
- Indoor air that is either too damp or too dry can create discomfort and air indoor units that can provide virtually silent operation.
